

Care Finder®

Your Care. Our Priority.

Safe Homes – Customized Solutions from Care Finder®

Most of the senior population, barring a small segment that lives in various care facilities, continue to live in their own homes. In today's times, the need to make them age-friendly has become very important. A safe home is more than just infrastructure. It is a holistic approach to living—physical, psychological and financial.

At Care Finder, we address the following aspects of safe living, making the lives of seniors better:

Infrastructure

Combination of structural alterations through architects, structural engineers and construction experts; safe flooring, safe bathrooms, floor lighting, overall lighting with glare considerations, sensor lights, electrical audit, etc. Outdoor space audits involve safety audits and suggestions.

Physical Safety

Safety features like fall prevention, wearables, alarms and switches, non-intrusive video, and RWA external audits.

Psychological

Buddy systems, addressing loneliness, travel, friends and entertainment.

Existential

Food, medical records (EMRs), access to medical care, and access to financial needs such as banking and ATM access.

Most houses were built or inherited when ageing was not on the horizon at the time of construction, more specifically in apartments and apartment complexes. Modifications have to be customized to the needs of specific individuals. We should recognize the fact that needs can be similar, but the safest solutions are not the same for everyone.

We have handled many projects at both audit and implementation levels. We listen, we understand, we suggest and implement. Over the last 10 years, we have worked with many families, helping them make their homes safer.

Our present activities are in Chennai city and we will be expanding through Tamil Nadu and Karnataka.
